Under Guidance Of

Dr.S.REVATHY , MBA,Ph.D

Department Of Business Administration

**Loyola College
Olaipadi-vettavalam
Nov/Dec -2025**

LOYOLA COLLEGE

Vettavalam -606 754 DEPARTMENT OF BUSINESS ADMINISTRATION

CERTIFICATE OF THE GUIDE

This is to certify that project work title “**. A STUDY ON TIME MANAGEMENT AS A TOOL FOR EMPLOYEE EFFICIENCY IN TIRUVANNAMALAI**” Is a Bonafide work of carried out in partial fulfilment for the award of Degree of Bachelor of Business Administration under my guidance for the III year/ V Semester during the Academic year 2025 - 2026

S.SHARMAL KUMAR

23023U08031

HEAD OF THE DEPARTMENT

FACULTY GUIDE

Place:

Date:

Submitted for The University Examination held on November/December 2025

Internal Examiner

External Examiner

ACKNOWLEDGEMENT

We express our heartfelt gratitude to all those who have contributed to the successful completion of our final project.

First and foremost, we extend our sincere thanks to **Loyola College, Vettavalam** and our management, and the **Department of Business Administration** for providing us with this opportunity to enhance our knowledge and practical skills.

We are deeply grateful to our **Rev.Dr.C.MARIANATHAN,S.J Superior**, for their continuous support, encouragement, and guidance in fostering an environment conducive to learning and research.

We sincerely thank **Rev. Dr. A. IGNACY, S.J Secretary**, Loyola College, Vettavalam, for his encouragement and moral support during the course of the project work.

We place our sincere gratitude to **Rev. Fr. Dr.MARIA WENISCH, S.J. Principal**, Loyola College Vettavalam, is continuous support and guidance in all ways.

We wish to express our deep sense of Gratitude **Prof. Dr.S.REVATHY, MBA, Ph.D** the Head of the Department of Business Administration, for having given us permission to do the work on project.

Words are boundless to express my deep gratitude to each one of the staff members specially our Guide **Prof. Dr.S.REVATHY, MBA, Ph.D.** whose valuable guidance, constant encouragement, healthy criticism, and generous support to have been of valuable help to us throughout the course of the project

We also extend our gratitude to all faculty members of the department for their encouragement and assistance. Special thanks to the organizations, professionals, and individuals who provided valuable data, responses, and insights for our study.

Finally, we thank our parents, friends, and classmates for their unwavering support and motivation, which helped us complete this project successfully.

CHAPTER I

INTRODUCTION

INDRODUCTION

1.1 Introduction

In every organization, the efficiency of employees plays a significant role in determining overall productivity and success. One of the major factors that influence efficiency is how well employees manage their time. With increasing workloads, tight deadlines, and multiple responsibilities, employees are often required to balance several tasks simultaneously. Without proper time management, work can become overwhelming, leading to stress, fatigue, and reduced effectiveness. On the other hand, employees who adopt effective time management strategies are more likely to complete tasks on schedule, maintain a healthy work-life balance, and contribute positively to organizational growth.

Time management involves the ability to set priorities, allocate time to specific tasks, and minimize time-wasting activities. It is not just about working harder, but about working smarter—ensuring that effort is directed towards activities that add the most value. In the modern workplace, where technology and competition demand higher levels of productivity, time management has become an indispensable skill. Organizations that encourage and train employees to manage their time effectively often experience improved performance, greater job satisfaction, and reduced turnover.

This study is therefore designed to explore time management as a tool for employee efficiency. By examining how proper time management practices influence employee performance, the study aims to highlight the importance of adopting structured time management techniques. It also seeks to provide insights for organizations on how to implement effective time management policies and training programs, thereby ensuring that both employees and employers benefit from improved productivity and efficiency.

1.2 Time Management

Time management is the process of planning, organizing, and controlling how much time is spent on specific tasks or activities in order to use it effectively and efficiently. It involves setting priorities, creating schedules, and allocating time wisely so that important tasks are completed within deadlines while reducing stress and avoiding wasted effort.

1.3 Employee Efficiency

Employee efficiency refers to the ability of a worker to complete tasks accurately,

quickly, and with minimal waste of resources such as time, effort, or materials. An efficient employee is not only able to deliver results within deadlines but also does so in a way that maximizes productivity while maintaining quality standards.

1.4 Definition of Time Management

Time management is the process of planning, organizing, and controlling the amount of time spent on specific tasks or activities in order to maximize productivity, meet deadlines, and achieve goals efficiently. It involves prioritizing tasks, avoiding time-wasting activities, and ensuring that work is completed in a structured and effective manner.

1.5 Definition of Employee Efficiency

Employee efficiency refers to the ability of an employee to accomplish assigned tasks accurately and promptly while making optimal use of available resources such as time, effort, and materials. It is the measure of how effectively an employee converts input (resources) into output (results) without compromising quality.

1.6 Techniques of Time Management to Improve Employee Efficiency Prioritization of Tasks

- Using tools like the Eisenhower Matrix (urgent vs. important tasks) to identify what needs immediate attention and what can be scheduled, delegated, or eliminated.
- Helps employees focus on high-value activities that directly contribute to organizational goals.
- **Goal Setting (SMART Goals)** Setting Specific, Measurable, Achievable, Relevant, and Time-bound goals. ○ Provides clear direction and keeps employees motivated to complete tasks efficiently.

Planning and Scheduling

- Creating daily, weekly, or monthly plans using calendars, planners, or digital tools.
- Ensures deadlines are met and tasks are completed in an organized sequence.

Avoiding Procrastination

- Breaking large tasks into smaller steps, using reminders, and setting short deadlines..

1.7 Advantages of Time Management in Employee Efficiency

- 1) **Increased Productivity** – Employees complete more tasks within a shorter period, boosting overall output.
- 2) **Better Prioritization** – Helps employees focus on important tasks that contribute most to organizational goals.
- 3) **Reduced Stress** – Proper planning minimizes last-minute pressure and workplace anxiety.
- 4) **Improved Work Quality** – Employees have enough time to focus on details, reducing errors.
- 5) **Enhanced Job Satisfaction** – A sense of accomplishment leads to higher motivation and morale.
- 6) **Work-Life Balance** – Efficient use of time prevents overwork, leaving space for personal life.
- 7) **Organizational Growth** – Higher efficiency from employees translates into increased performance and profitability.

1.7 Disadvantages of Time Management in Employee Efficiency

- 1) **Over-Planning** – Spending too much time scheduling can reduce flexibility and waste time.
- 2) **Pressure to Meet Deadlines** – Strict time allocation may create unnecessary stress for some employees.
- 3) **Reduced Creativity** – Rigid schedules can limit brainstorming, innovation, and spontaneous problem-solving.
- 4) **Dependency on Tools** – Heavy reliance on calendars, planners, or apps may be counterproductive if misused.
- 5) **Difficulty in Adaptation** – Not all employees easily adjust to structured time management systems.
- 6) **Risk of Burnout** – Some employees may push themselves too hard to maximize efficiency.

1.8 Impacts of Time Management on Employee Efficiency

• Improved Productivity

When employees manage their time effectively, they complete more tasks within set deadlines. This increases individual output and contributes to the overall productivity of the organization.

- **Higher Quality of Work**

Proper scheduling allows employees to dedicate sufficient time to each task, reducing errors and improving accuracy. Efficiency rises because employees are not rushing at the last minute.

- **Reduced Stress and Work Pressure**

Time management helps employees plan ahead, avoid procrastination, and handle tasks in manageable portions. This lowers stress and creates a more balanced work environment.

- **Better Decision-Making**

Employees who manage time well have more clarity in prioritizing tasks, which leads to sound decisions and effective problem-solving.

- **Enhanced Job Satisfaction and Morale**

Finishing tasks on time gives employees a sense of achievement, which boosts confidence, motivation, and overall job satisfaction.

- **Work-Life Balance**

Employees who allocate time efficiently are better able to balance professional responsibilities with personal life, leading to improved mental and physical wellbeing.

- **Organizational Growth**

Efficient employees strengthen organizational performance. Projects are delivered on time, customer satisfaction improves, and long-term goals are achieved more effectively.

1.9 COMPANIES THAT HAVE SUCCESSFULLY IMPLEMENTED TIME MANAGEMENT TECHNIQUES TO ENHANCE EMPLOYEE EFFICIENCY

Microsoft Japan

In 2019, Microsoft Japan conducted a four-day workweek trial, resulting in a 40% increase in productivity, measured by sales per employee, compared to the same period the previous year. The initiative, part of the "Work Life Choice Challenge," allowed employees an extra day off and reduced time spent in meetings and emails. Over 90% of the 2,280 employees reported being positively impacted by these changes.

Basecamp

Basecamp has championed a four-day workweek, leading to a 30% reduction in burnout rates and a significant rise in employee satisfaction. This approach demonstrates how adjusting work schedules can positively impact employee well-being and productivity.

Google

Google encourages employees to take short breaks in nap pods, recognizing the importance of stepping away briefly to refocus their time effectively. Additionally, the company promotes time-blocking techniques, scheduling focused work periods followed by short breaks to maintain productivity throughout the day. Google also offers flexible work hours, allowing employees to structure their workday around their most productive times.

Hubstaff

Hubstaff helps remote and global companies manage time and teams efficiently. Companies like Front Runner Films have utilized Hubstaff's time tracking tools to monitor employee productivity, leading to improved time management and cost savings.

Tesla

During a week-long Memorial Day production shutdown, Tesla's Austin factory turned the pause in operations into a strategic opportunity for employee development.

1.10 OBJECTIVES OF STUDY

- 1) To analyse the importance of time management in enhancing employee efficiency and productivity.
- 2) To evaluate the challenges employees face in managing their time effectively.
- 3) To assess the impact of organizational support (training, policies, culture) on employees' time management skills.

1.11 NEEDS OF STUDY

- Time management is a critical skill that directly impacts employee efficiency, productivity, and overall organizational performance.
- In modern workplaces, employees often face multiple tasks, tight deadlines, and competing priorities.
- Poor time management can lead to stress, delays, and reduced output. Understanding the importance of time management helps organizations:
- Identify key practices and strategies employees use to organize their work.
Recognize how employees prioritize tasks and meet deadlines.
- Research on time management can highlight gaps, challenges, and areas for improvement affecting individual and organizational performance.

1.12 LIMITATION OF STUDY

- The study has certain limitations despite its strengths.
- It primarily relies on self-reported data, which may be affected by personal bias or inaccurate recall.
- The sample size and geographic scope may not fully represent all employees, limiting the generalizability of the findings.
- External factors such as organizational culture, workload variations, and individual motivation can influence efficiency, making it difficult to attribute outcomes solely to time management practices.
- Constraints in time, resources, and access to detailed company records may have limited the depth of the analysis.

COMPANY PROFILE

INDUSTRIES IN TIRUVANMALAI DISTRICT

Major Industries and Sectors

- Agriculture & Agro-based Industries Cultivation of paddy, groundnut, bananas, sugarcane etc. are important in the district. Agro-based units like sugar mills (e.g. in Cheyyar, Polur), fruit/vegetable processing potential, floriculture etc.
- Textiles and Silk Weaving The weaving of silk sarees is a traditional industry. Arani is known as a center for silk sarees (handloom & some power-loom).
- Cotton mills also exist: e.g. Lakshmi Saraswathy Cotton Mill at Sevr, Arni.
- Industrial Estates & Manufacturing Complexes
 - The SIPCOT industrial estate at Cheyyar is a significant hub. It hosts manufacturing units, especially in leather goods, automobile accessories etc.
- There's also a developing SIPCOT / industrial complex potential in other parts.
- Mining / Stone Quarrying / Granites
 - Granite industries: black stones, coloured stones, soft stones are extracted and processed in several blocks (Chengam, Polur, etc.) Firms like Palaniappa Blue Metals (stone crushing and materials for construction) operate here.
- Other MSME / Cottage Industries Thiruvannamalai has lots of small-scale / cottage / rural industries: flour mills, silk reeling, handlooms, etc There are many units dependent on local raw materials: food processing, wooden products, etc
- Infrastructure / Industrial Growth Prospects Industrial estates being developed
- (industrial parks, SIPCOT complexes) to improve capacity New industrial estates inaugurated in Thiruvannamalai to support MSMEs.

Geography & Basic Facts

- Thiruvannamalai district is in Tamil Nadu. It was formed in 1989 by bifurcating North Arcot.
- The district area is about 6,355.6 sq km
- It is largely rural, with agriculture being the main stay. Approximately 56% of people depend on agricultural or agriculture-related works.
- In terms of industrialization, it is considered one of the backward districts in TN in terms of industrial output.

CHAPTER II

REVIEW OF LITERATURE

CHAPTER -II

2.1 REVIEW OF LITERATURE

Aeon, B., & Aguinis, H. (2017)

This review synthesizes decades of research, showing strong links between effective time management and improved performance, well-being, and reduced stress. The authors emphasize context-specific strategies tailored to job demands and individual differences. Their work urges managers to adopt long-term, evidence-based approaches to time management interventions rather than one-size-fits-all solutions.

Britton, B. K., & Tesser, A. (1991)

Although based on academic settings, this study demonstrated that effective time management significantly improved performance outcomes. It suggests transferable principles—like goal setting and regular progress checks—are equally vital in workplace contexts to enhance project completion rates and output quality.

Green, P., & Skinner, D. (2005)

Green and Skinner found moderate but consistent performance improvements after time management training. However, they caution that benefits diminish without follow-up. Organizations should integrate time management into performance systems rather than treat it as a one-off workshop.

Hall, B. L., & Hursch, D. E. (1982)

This experimental study evaluated a time management training program and found significant improvements in employee productivity. The authors highlight the importance of feedback and reinforcement to maintain new habits, suggesting that ongoing support is essential for sustainable efficiency gains. Their findings laid the foundation for modern time management training methods.

Hafner, A., Stock, A., Pinneker, L., & Strohle, S. (2014)

The authors evaluated a stress-prevention program centered on time management training and found reduced stress and improved performance. Their findings confirm time management as both a productivity tool and a stress-management strategy.

Koch, C. (1998)

Through case studies, Koch showed that structured planning and scheduling reduce wasted effort. His work positions time management as an organizational as well as an individual tool, suggesting businesses adopt systematic approaches to scheduling and task allocation.

Lakein, A. (1973)

Lakein's classic book introduced practical tools—like prioritizing tasks and setting deadlines—that remain influential. His insights underscore focusing on critical tasks rather than simply doing more, making them valuable for employees seeking efficiency.

Lay, C. H., & Schouwenburg, H. C. (1993)

This study links procrastination to poor time management, showing how prioritization skills can reduce stress and improve efficiency. It emphasizes addressing psychological barriers to effective time use, making time management a tool for both productivity and mental health.

Macan, T. H. (1994)

Macan's process model identifies how time management behaviors—such as planning, prioritizing, and goal setting—affect perceived control over time. Higher perceived control leads to increased job satisfaction and performance, illustrating that time management is not just scheduling but a psychological process affecting efficiency. The study suggests that organizations should enhance both employee skills and empowerment to maximize efficiency gains.

Peeters, M. A., & Rutte, C. G. (2005)

This study found that time management mitigates work–family conflict, enabling employees to remain focused and efficient. It highlights how supporting time management can improve work-life balance, thereby reducing absenteeism and turnover.

CHAPTER III

RESEARCH METHODOLOGY

CHAPTER -III

RESEARCH METHODOLOGY

3.1 RESEARCH

Research is a systematic and scientific process of collecting, analyzing, and interpreting information to increase our understanding of a topic or problem. It helps in discovering new facts, verifying old facts, developing new theories, and finding solutions to specific issues.

3.2 RESEARCH METHODOLOGY

Research methodology is the systematic framework that guides how research is conducted. It refers to the methods, techniques, and procedures used to identify a research problem, collect data, analyze information, and present findings.

3.2 DATA COLLECTION

Data collection is the process of gathering information from different sources to answer research questions, test hypotheses, and achieve study objectives. It ensures that the researcher has reliable and valid evidence to analyze and draw conclusions.

3.4 TYPES OF DATA

- 3.4.1 Primary Data – Collected first-hand by the researcher.
- 3.4.2 Secondary Data – Already collected by others, used for analysis.

Primary Data

Primary data is the **first-hand information** collected directly by the researcher from the original source for a specific research purpose.

It is fresh, original, and collected to solve the particular research problem at hand.

Secondary Data

Secondary data refers to the information already collected and recorded by others for a different purpose but used by the researcher for their own study.

It is not first-hand but comes from existing sources such as books, reports, databases, and websites.

3.5 RESEARCH DESIGN

Descriptive study is under taken in this project.

Descriptive research is a type of research that aims to describe the characteristics of a population, situation, or phenomenon. It focuses on “what” rather than “why” something happens. Instead of trying to establish cause-and-effect relationships, descriptive research observes, records, and analyzes patterns, trends, or behaviors as they naturally occur.

3.6 SAMPLE UNIT

The samples were carried out among the varies type of employees at Tiruvannamalai district.

3.7 SAMPLE SIZE

50 samples were randomly collected from varies type of employees in Tiruvannamalai district.

3.8 SAMPLING METHOD

Simple random sampling method was used to select the sample of the employees

Simple random sampling is a sampling method where every member of the population has an equal chance of being selected. It is one of the most basic and straightforward ways to select a sample from a larger group.

3.9 AREA OF STUDY

The area of study at Tiruvannamalai district

3.10 PERIOD OF TIME

Surveys were conducted during the period of 15 days

3.11 SATATISTICAL TOO S USED

The following tool and techniques have been used for the statistical analysis randomly selected data.

3.11.1 Percentage analysis

PERCENTAGE ANALYSIS

Percentage analysis is a simple and widely used statistical tool in research to represent data in the form of percentages. It helps in comparing and interpreting data easily, especially when dealing with survey responses or categorical data. By converting raw data into percentages, researchers can show the proportion of respondents for each category relative to the total sample, making the results more understandable and visually clear.

CHAPTER IV

DATA ANALYSIS & INTERPREDATION

CHAPTER IV
DATAANALYSIS & INTEPREDATION

GENDER

TABLE 4.1

S.NO	GENDER	NO. OF RESPONENTS	PERCENTAGES
1	Male	30	60%
2	Female	20	40%
3	Others	0	0%
	TOTAL	100	100%

CHART 4.1

INTERPRETATION

The table 4.1 shows that the majority of respondents are male (60%), followed by female (40%), while no respondents belong to the others category. This indicates that the survey is male- dominated with a moderate female representation.

EDUCATION LEVEL

TABLE 4.2

S.NO	EDUCATION LEVEL	NO. OF RESPONENTS	PERCENTAGES
1	Diploma	10	20%
2	Graduate	10	20%
3	Post Graduate	20	40%
4	Others	0	0%
	TOTAL	50	100%

CHART 4.2

INTERPRETATION

The table 4.2 indicates that most respondents (40%) are postgraduates, followed by graduates and diploma holders with 20% each, while no respondents fall under the “others” category. This shows that the survey mainly includes highly educated participants.

EXPERIENCE

TABLE 4.3

	EXPERIENCE	NO. OF RESPONENTS	PERCENTAGES
1	0-2	10	20%
2	3-5	20	40%
3	6-10	10	20%
4	10+	10	20%
	TOTAL	50	100%

CHART 4.3

INTERPRETATION

The table 4.3 shows that the majority of respondents (40%) have 3–5 years of experience, while 20% each have 0–2 years, 6–10 years, and more than 10 years of experience. This indicates that the sample mainly consists of moderately experienced individuals.

WORK EFFICIENCY

TABLE 4.4

S.NO	WORK EFFICENCY	NO. OF RESPONENT	PERCENTAGE
1	Strongly agree	15	30%
2	Agree	25	50%
3	Neutral	6	12%
4	Disagree	4	8%
	TOTAL	50	100%

CHART 4.4

INTERPRETATION

The table 4.4 indicates that most respondents (50%) agree and 30% strongly agree that their work efficiency is good, while 12% remain neutral and 8% disagree. This shows that the majority of respondents have a positive opinion about their work efficiency.

DAILY/WEEKLY GOALS

TABLE 4.5

S.NO	DAILY/WEEKLY GOALS	NO.OF . RESPONENT	PERCENTAGE
1	Always	16	32%
2	Often	22	44%
3	Sometimes	8	16%
4	Rarely	2	4%
5	Never	2	4%
	Total	50	100%

CHART 4.5

INTERPRETATION

The table 4.5 shows that 44% of respondents often and 32% always set daily or weekly goals, while 16% sometimes, and only 4% each rarely or never do so. This indicates that the majority of respondents regularly set goals to manage their work effectively

WORK STRESS

TABLE 4.6

S.NO	WORK STRESS	NO.OF . RESPONENT	PERCENTAGE
1	Strongly agree	23	46%
2	Agree	17	34%
3	Neutral	7	14%
4	Disagree	0	0
5	Strongly disagree	3	6%
	TOTAL	50	100%

CHART 4.6

INTERPRETATION

The table 4.6 reveals that 46% of respondents strongly agree and 34% agree that they experience work stress, while 14% are neutral and 6% strongly disagree. This indicates that the majority of respondents experience some level of work stress in their jobs.

BENEFITS

TABLE 4.7

S.NO	BENEFITS	NO. OF RESPONENTS	PERCENTAGE
1	Higher Productivity	8	16%
2	Reduced stress	19	38%
3	Meeting Deadlines	7	14%
4	Better work-life balance	16	32%
5	Others	0	0
	TOTAL	50	100%

CHART 4.7

INTERPRETATION

The table 4.7 shows that 38% of respondents believe reduced stress is the main benefit, followed by 32% citing better work-life balance, 16% higher productivity, and 14% meeting deadlines. This indicates that the majority view effective work management as a way to reduce stress and improve balance.

IMPORTANCE OF TIME MANAGEMENT

TABLE 4.8

S.NO	IMPORTANCE OF TIME MANAGEMENT	NO. OF RESPONENTS	PERCENTAGE
1	Very important	22	44%
2	Important	22	44%
3	Neutral	6	12%
4	Slightly Important	0	0
5	Not Important	0	0
	TOTAL	50	100%

CHART 4.8

INTERPRETATION

The table 4.9 shows that 32% of respondents disagree and 26% each agree or remain neutral about facing difficulty in prioritizing tasks, while 14% strongly agree and strongly disagree.

DISTRACTION

TABLE 4.10

S.NO	DISTRACTION	NO. OF RESPONENTS	PERCENTAGE
1	Excessive meeting	12	24%
2	Social media	10	20%
3	Multitasking	12	24%
4	Lack of clarity	6	12%
5	Others	0	0
	TOTAL	50	100%

CHART 4.9

INTERPRETATION

The table 4.10 shows that 24% of respondents are distracted by excessive meetings, 24% by multitasking, 20% by social media, and 12% by lack of clarity. This indicates that meetings and multitasking are the main sources of distraction for the majority of respondents.

WORKLOAD AFFECTS TIME

TABLE 4.11

S.NO	WORKLOAD AFFECTS TIME	NO. OF RESPONENTS	PERCENTAGE
1	Yes	25	50%
2	No	7	14%
3	Sometimes	18	36%
	TOTAL	50	100%

CHART 4.11

INTERPRETATION

The table 4.11 shows that 50% of respondents feel that workload affects their time, 36% say it sometimes does, and 14% feel it does not. This indicates that workload has a significant impact on time management for most respondents.

PROCRASTINATION AFFECT MY WORK

TABLE 4.12

S.NO	PROCRASTINATION AFFECT MY WORK	NO. OF RESPONENTS	PERCENTAGE
1	Strongly agree	19	38%
2	Agree	7	14%
3	Neutral	18	36%
4	Disagree	0	0
5	Strongly disagree	0	0
	TOTAL	50	100%

CHART 4.12

INTERPRETATION

The table 4.12 shows that 38% of respondents strongly agree and 14% agree that procrastination affects their work, while 36% are neutral and none disagree..

BIGGEST CHALLENGES

TABLE 4.13

S.NO	BIGGEST CHALLENGES	NO. OF RESPONENTS	PERCENTAGE
1	Poor planning	22	44%
2	Interruption	16	32%
3	Unrealistic deadlines	9	18%
4	Lack of tool	3	6%
5	Others	0	0
	TOTAL	50	100%

CHART 4.13

INTERPRETATION

The table 4.13 shows that 44% of respondents consider poor planning as their biggest challenge, followed by 32% citing interruptions, 18% unrealistic deadlines, and 6% lack of tools. This indicates that poor planning and interruptions are the main obstacles affecting respondents' work efficiency.

ORGANIZATION PROVIDE TIME MANAGING TRAINING

TABLE 4.14

S.NO	ORGANIZATION PROVIDE TIME MANAGING TRAINING	NO. OF RESPONENTS	PERCENTAGE
1	Strongly agree	15	30%
2	Agree	25	50%
3	Neutral	6	12%
4	Disagree	4	8%
5	Strongly disagree	0	0
	TOTAL	50	100%

CHART 4.14

INTERPRETATION

The table 4.14 shows that 50% of respondents agree and 30% strongly agree that their organization provides time management training, while 12% are neutral and 8% of the main off disagree. This indicates that most respondents feel their organization supports time management development through training.

ORGANIZATIONAL POLICIES SUPPORT TIME MANAGEMENT

TABLE 4.15

S.NO	ORGANIZATIONAL POLICIES SUPPORT TIME MANAGEMENT	NO. OF RESPONENTS	PERCENTAGE
1	Strongly agree	15	30%
2	Agree	19	38%
3	Neutral	11	22%
4	Disagree	5	10%
5	Strongly disagree	0	0
	TOTAL	50	100%

CHART 4.15

INTERPRETATION

The table 4.15 shows that 38% of respondents agree and 30% strongly agree that organizational policies support time management, while 22% are neutral and 10% new table this disagree. This indicates that most respondents perceive their organization's policies as supportive of effective time management.

ORGANIZATIONAL CULTURE ENCOURAGES EFFICIENT USE OF TIME

TABLE 4.16

S.NO	ORGANIZATIONAL CULTURE ENCOURAGES EFFICIENT USE OF TIME	NO. OF RESPONENTS	PERCENTAGE
1	Strongly agree	17	34%
2	Agree	17	34%
3	Neutral	12	24%
4	Disagree	2	4%
5	Strongly disagree	2	4%
	TOTAL	50	100%

CHART 4.16

INTERPRETATION

The table shows that 34% of respondents strongly agree and 34% agree that the organizational culture encourages efficient use of time, while 24% are neutral and 8% (4% disagree + 4% strongly disagree) do not feel the same. This indicates that most respondents believe the organizational culture promotes effective time management.

CHAPTER V

FINDINGS, SUGGESIONS,

CONCLUSION

CHAPTER V

5.1 FINDING:

- The majority of respondents (60%) are male, showing that the survey is male-dominated with moderate female participation (40%).
- Most respondents (40%) are postgraduates, indicating that the study includes highly educated participants.
- A large portion (40%) of respondents have 3–5 years of experience, suggesting that the sample mainly consists of moderately experienced individuals.
- Most respondents (80%) either agree or strongly agree that their work efficiency is good, reflecting a positive attitude toward performance.
- A majority (76%) of respondents regularly set daily or weekly goals, showing proactive time management habits.
- Around 80% (46% strongly agree + 34% agree) experience work stress, revealing high stress levels among employees.
- The most reported benefit of effective time management is reduced stress (38%), followed by better worklife balance (32%).
- About 88% (44% very important + 44% important) believe that time management is highly important in their professional lives.
- Many respondents manage task prioritization effectively, though some face moderate difficulty in prioritizing tasks.
- Excessive meetings (24%) and multitasking (24%) are identified as the major sources of distraction affecting productivity.
- Half of the respondents (50%) agree that workload affects their time management, showing a strong link between workload and efficiency.
- About 52% (38% strongly agree + 14% agree) admit that procrastination affects their work, highlighting a key issue in managing time effectively.
- Poor planning (44%) and interruptions (32%) are the biggest challenges faced by respondents in managing their time.
- Most respondents (80%) agree or strongly agree that their organization provides time management training, showing good organizational support.
- A majority (68%) of respondents agree that organizational policies support time management, indicating a positive institutional framework.

- Around 68% (34% strongly agree + 34% agree) believe that their organizational culture encourages efficient use of time, showing a supportive and time-conscious work environment.

5.2 SUGGESTIONS:

- Since most employees recognize the importance of time management, periodic training programs can further enhance their skills and address procrastination issues.
- With 80% of employees experiencing work stress, wellness programs, relaxation sessions, and workload balancing can help reduce burnout.
- Providing tools like digital planners or task management software can help employees organize and prioritize tasks better.

5.1 CONCLUSION:

The study on time management and work efficiency provides valuable insights into how employees perceive and practice effective time utilization in their professional lives. The findings reveal that most respondents are moderately experienced and highly educated individuals who recognize the importance of managing their time efficiently.

A significant majority exhibit a positive attitude toward their work efficiency and actively engage in setting daily or weekly goals, which reflects proactive and organized work behavior. However, the study also highlights notable challenges such as work-related stress, poor planning, excessive meetings, and multitasking, which hinder optimal productivity. Procrastination and workload were also found to be major factors affecting employees' ability to manage their time effectively.

On a positive note, most respondents acknowledged that their organizations provide training and that organizational policies and culture support efficient time management. This suggests that companies are increasingly aware of the importance of time management in improving performance, reducing stress, and enhancing overall employee satisfaction.

In conclusion, while employees understand and value the importance of time management, there remains a need for continuous improvement in planning, stress management, and reducing workplace distractions. Strengthening organizational support systems, providing regular training, and promoting a balanced workload can further enhance employees' time management skills and overall productivity.
